DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-21, drawn to an isolated nucleic acid molecule encoding the transcription factor Hahb-4, a vector, host cell, transgenic plant or a method of producing a water-stress tolerant transgenic plant comprising said nucleic acid molecule, or wherein said nucleic acid molecule is defined in SEQ ID NOs: 1 or 2.

Group II, claim(s) 22-29, and 32-40, drawn to an isolated nucleic acid molecule comprising a promoter, a construct, host cell, transgenic plant, or a method for obtaining a transgenic plant, or wherein said promoter sequence is defined in SEQ ID NO: 3.

Group III, claim(s) 22-29, and 32-40, drawn to an isolated nucleic acid molecule comprising a promoter, a construct, host cell, transgenic plant, or a method for obtaining a transgenic plant, or wherein said promoter sequence is defined in SEQ ID NO: 10.

Group IV, claim(s) 30-31, drawn to a method for expressing at least one protein of interest in a host cell, comprising SEQ ID NO: 3.

Group V, claim(s) 30-31, drawn to a method for expressing at least one protein of interest in a host cell, comprising SEQ ID NO: 10.

The inventions listed as Group I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking Groups I-V appear to be a nucleic acid sequence encoding Hahb-4 transcription factor. However, Chan et al. (NCBI, GenBank Sequence Accession No. AF339748, Published March 26, 2001) teach a nucleic acid sequence encoding Hahb-4 transcription factor. Also Gago et al. (NCBI, GenBank Sequence Accession No. AF339749, Published March 26, 2001) teach Hahb-4 gene promoter region. It may be emphasized that a fragment of SEQ NO: 1 or SEQ ID NO: 2 reads on a nucleic acid sequence encoding any Hahb-4 transcription factor protein.

Art Unit: 1638

Therefore, the technical feature linking Groups I-V does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over prior art.

Applicants are reminded that different nucleotide sequences and amino acid sequences are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute different inventive concepts.

Accordingly, Groups I-V are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
